

ALM.060.600

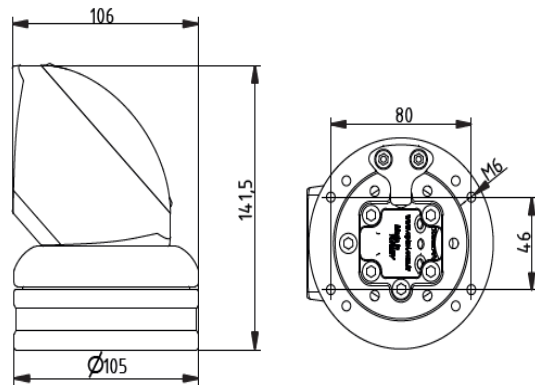

HORIZONTAL PANEL INPUT 310°

The panel corner entry module is designed for situations where the operator panel is needed just after a 90° corner turn. The product's max. diameter is $\varnothing 105$ and the rotation angle around its axis is 320° in total. Thanks to the rotation feature of the module, the machine operator can position the panel he is using by turning the direction of the panel to the right or left. This module is specially designed for large sheet metal or stainless panels with a minimum depth of 110mm.

This product is compatible with the ALM.1120 Series.
